

Integrated Solutions for Nature and Climate Change Adaptation

12th September 2024, Alexander Wiese

The Climate Adaptation – Nature Nexus

Climate adaptation and nature are interconnected

Healthy natural ecosystems provide help to adapt to impacts of climate change

Example: Mangroves are important habitats for fish and birds on one side and protect coastal communities from storm surges on the other side

Effective financing solutions should support nature and adaptation projects

Selection Methodology for Finance Solutions

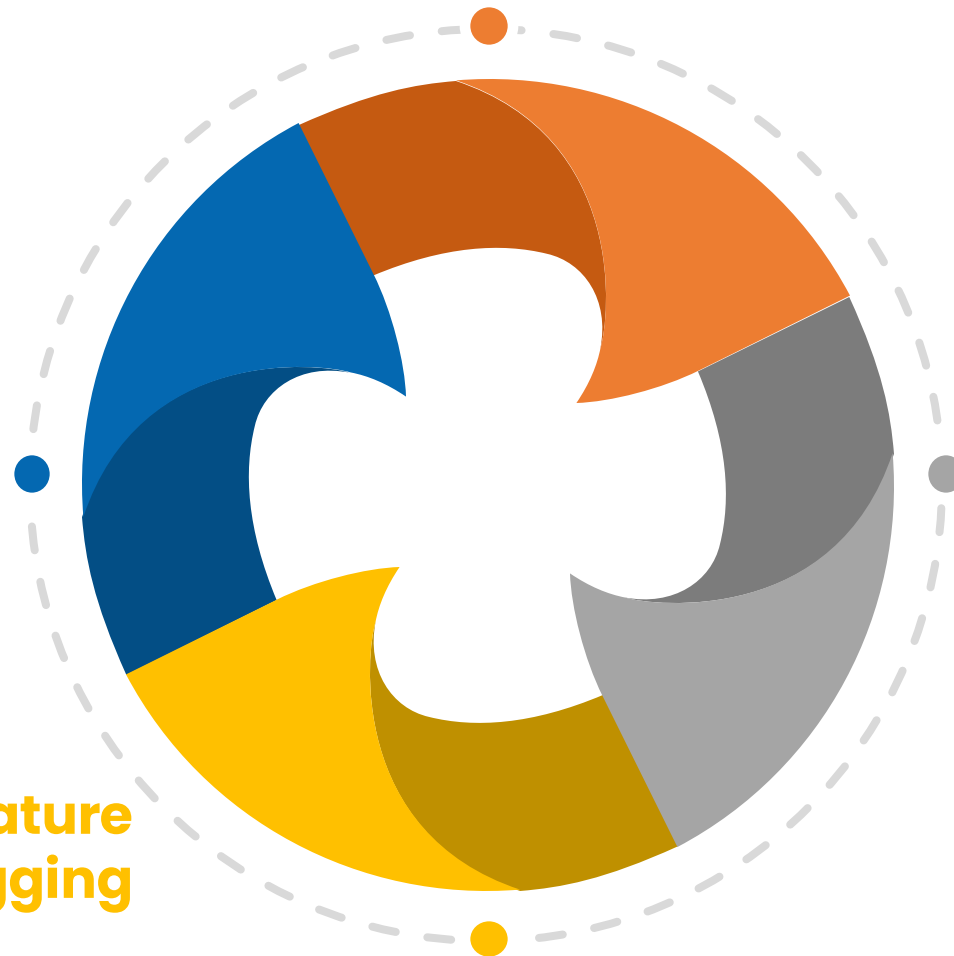

- Interdependency climate adaptation and nature
- Can climate adaptation benefits be clearly defined in the financial solution?
- Can activities to measure and address climate adaptation be efficiently implemented
- How scalable or replicable is the solution?
- Positive examples of combining climate adaptation and nature available?
- Interdependency climate adaptation and nature
- Can climate adaptation benefits be clearly defined in the financial solution?
- Can activities to measure and address climate adaptation be efficiently implemented
- How scalable or replicable is the solution?

Selected Financial Products

**Sustainability
Linked Bonds**

**Payment for
Ecosystem Services**

PPP

**Adaptation & Nature
Budget Tagging**

- Combining nature and climate adaptation is crucial to solve the twin crisis
- There is no shortage of financial solutions addressing nature and adaptation
 - Out of 156 nature related financial products analysed, 67 have high adaptation benefits
- However, standardisation of climate-nature-related targets and KPIs is missing
- Some organisations interviewed have identified the importance of combining nature and adaptation
