

Integrating Agriculture in National Adaptation Plans (NAP–Ag)

WORKING TOWARD GENDER-RESPONSIVE ADAPTATION PLANS

“Gender, sustainable development and climate change are inextricably linked and therefore, the three must be tackled simultaneously.”

Michael Obara, Coordinator of the Climate Change Unit at the Ministry of Agriculture, Livestock and Fisheries of Kenya

“I feel that I can improve the way I mainstream gender in my activities, such as in report writing and budgeting. And I plan to include components on gender in trainings for extension staff – in this way we can reach the farmers.”

Mulele Moses of the Ministry of Agriculture of Zambia
